SUMMARY

Driven Data Analyst with full-stack analytics capabilities, experienced in translating complex data into actionable business intelligence. Successfully designed dashboards and automation workflows that significantly reduced reporting time and improved decision accuracy. Experienced in maintaining analytics environments (Tableau/Alteryx) to ensure data availability for stakeholders.

EXPERIENCE

Analytics Engineer

OR Technologies Sdn Bhd

September 2025 - Present

- Designed and deployed an interactive Tableau dashboard for Sales & Use Tax, providing audit visibility into category-based tax breakdowns and inter-state transaction risks.
- Automated multi-state tax calculations using Alteryx, reducing manual processing time by 70% and improving data accuracy to ~95%.
- Provided Tier-2 technical support for Tableau Server, resolving user connectivity issues and gateway errors to minimize downtime for reporting teams.
- Collaborated with business users to define KPIs and translate complex datasets into actionable insights, ensuring alignment with strategic goals.

Artificial Intelligence Researcher Intern

TM Research & Development

October 2024 - April 2025

- Conducted extensive feature engineering on OCR-based data to validate key business metrics extracted from unstructured documents.
- Developed metric validation dashboards to monitor model performance, ensuring high data integrity for downstream applications.

PROJECT

Travel Insurance Conversion Analysis

github.com/sofaquitegud/travel-insurance-analysis

- Analyzed quote-to-sale conversion rates to optimize marketing ROI and target high-potential demographics.
- Utilized SHAP values to interpret model outputs, identifying "Destination," "Age," and "Cover Level" as top conversion factors.
- Built an interactive Streamlit dashboard allowing stakeholders to filter real-time conversion metrics by platform and age group.

NFL Big Data Bowl 2026 Analysis

github.com/sofaquitegud/NFL_Big_Data_Bowl_2026

- Analyzed 560K+ records of player-tracking data to uncover behavioral patterns in player movement and speed.
- Visualized spatial clustering showing most players maintain 10–20 yard proximity to the ball, and quantified the correlation between player weight and acceleration.
- Created heatmaps and trajectory plots to tell a data story regarding positional speed variability.

Staff Health Metrics Tool

github.com/sofaquitegud/ehealth

- Designed a comprehensive health reporting tool generating "Latest" and "Trending" snapshots of staff wellness.
- Integrated AI-powered natural language summaries to provide readable health recommendations based on BMI, stress, and hypertension metrics.

SKILLS

Visualization: Tableau, Streamlit, Matplotlib, Plotly, Seaborn

Analytics: Exploratory Data Analysis (EDA), SHAP Interpretation, Hypothesis Testing, Feature Engineering

Tools: Python (Pandas, NumPy, Scikit-learn), Alteryx, SQL, Git
