

MUHAMMAD SYAFIQ FARHAN MOHD FARIDZ

Tel: +60128313931 Email: syafiq.mfaridz@gmail.com Github: <https://github.com/sofaquitegud>

PROFESSIONAL SUMMARY

Data Engineer with hands-on experience building and maintaining production data pipelines, ETL workflows, and analytics systems. Proven track record in improving data reliability, optimizing processing performance, and delivering scalable data solutions. Strong foundation in data modeling, orchestration, and data quality validation.

TECHNICAL SKILLS

Programming & Querying: Python, SQL

Data Engineering & Pipelines: ETL Development, Data Modeling, Medallion Architecture, dbt

Databases & Storage: PostgreSQL, MongoDB, MSSQL

Orchestration & Processing: Apache Airflow

APIs & Backend: REST APIs, FastAPI

Tools & Infrastructure: Docker, Git, Alteryx

Visualization: Tableau, Streamlit

PROFESSIONAL EXPERIENCE

OR TECHNOLOGIES, Kuala Lumpur, Malaysia

Analytics Engineer | Analytics Engineering

September 2025 - Present

- Migrated enterprise Alteryx Server infrastructure with zero workflow loss, ensuring continuity of critical data pipelines
- Designed and optimized ETL pipelines supporting enterprise reporting, improving processing efficiency and reliability
- Resolved **20+ production data issues** by identifying root causes in pipeline logic, reducing recurring failures
- Redesigned inefficient workflows in collaboration with stakeholders, improving **data processing time and system stability**
- Built and maintained automated tax reporting pipelines, reducing **manual workload by ~70%**
- Implemented improvements in pipeline logic and documentation to enhance **data consistency and maintainability**

TM Research & Development, Selangor, Malaysia

Artificial Intelligence Researcher | Center of Artificial Intelligence

October 2024 – April 2025

- Built Python-based data pipelines ingesting data from CSV and PostgreSQL sources
- Implemented data validation frameworks using structured schema checks to ensure data quality
- Developed REST APIs using FastAPI to expose processed data for downstream applications
- Designed modular data processing logic for health metrics aggregation and reporting
- Collaborated across frontend, backend, and database teams to deliver integrated data solutions

PROJECTS

Malaysia Cost of Living & Salary Reality (<https://github.com/sofaquitegud/my-living-index>)

Tech stack: Pyspark, Delta Lake, Plotly

March 2026 – Present

- Designed and implemented end-to-end data pipeline using **Medallion Architecture** on Databricks
- Ingested and unified **7 datasets** from DOSM into Delta Lake storage
- Built scalable data transformation pipelines using PySpark for cleaning, enrichment, and metric computation
- Developed Gold-layer analytical tables optimized for querying and dashboard consumption
- Produced interactive dashboards and analytical outputs to evaluate income vs inflation trends

Impact: Delivered a scalable, cloud-based data pipeline demonstrating distributed processing, data modeling, and analytics readiness

Malaysia Economic Data Pipeline (<https://github.com/sofaquitegud/economic-data-pipeline>)

Tech stack: Python, PostgreSQL, dbt, Airflow, Docker

January 2026 - Present

- Designed end-to-end data pipeline using **Medallion Architecture (Bronze, Silver, Gold)**
- Ingested data from 5 external government APIs, handling ingestion, transformation, and storage
- Built modular transformation layer using dbt, producing **analytics-ready datasets**
- Implemented data validation framework using Pydantic to ensure **data integrity across pipeline stages**

- Orchestrated pipeline workflows using Airflow, enabling **scheduled and reliable data processing**
- Containerized full pipeline using Docker for **reproducible deployment**

Impact: Production-style pipeline demonstrating ingestion, orchestration, transformation, validation, and deployment

Staff Health Analytics System (<https://github.com/sofaquitequd/ehealth-analyser>)

Tech stack: Python, FastAPI, PostgreSQL

October 2024 – April 2025

- Built data ingestion pipeline integrating CSV and PostgreSQL sources
- Implemented data cleaning and validation logic to ensure data consistency
- Designed modular data processing layer for health metric computation and reporting
- Developed REST API endpoints using FastAPI to expose processed data to downstream applications
- Generated structured outputs for analytics and reporting use cases
- Integrated AI-generated recommendations using prompt engineering (LangChain + OpenAI API)

Impact: Delivered an end-to-end data processing system with API-based data access for frontend consumption

CERTIFICATIONS

CompTIA Data+ (DA0-002) — CompTIA

- Issued: March 2026
- Expires: March 2029
- Credential URL: https://www.credly.com/badges/d93672f2-b8a5-4419-b408-a64c7213eb08/public_url

Google Advanced Data Analytics — Google

- Issued: April 2025
- Credential URL: https://www.credly.com/badges/e235dfde-6517-431d-9682-8167b8cc0165/public_url

Google Business Intelligence — Google

- Issued: August 2025
- Credential URL: https://www.credly.com/badges/f27242b9-7228-41e8-bcd2-1f2ee6e39047/public_url

EDUCATION

INTERNATIONAL ISLAMIC UNIVERSITY MALAYSIA, Selangor, Malaysia

Bachelor of Computer Science, Data Science and Computational Intelligence

October 2020 – August 2025
